Aims and Scope: *Numerical Heat Transfer, Part B: Fundamentals* is an international journal devoted to publishing papers on aspects of the methodology for the numerical solution of problems of heat transfer, mass transfer and fluid flow. Also within the scope of the journal is the modeling of complex physical phenomena prerequisite to the attainment of numerical solutions. Papers presenting numerical or experimental results that support the methodology development are also appropriate to the journal. On the other hand, papers whose dominant thrust is the attainment and presentation of numerical results should be submitted to a companion journal, *Numerical Heat Transfer, Part A: Applications*.

Abstracted/Indexed in: CSA Aluminum Industry Abstracts; CSA Computer Information Systems Abstracts; CSA Corrosion Abstracts; CSA Engineered Materials Abstracts; CSA Environmental Sciences & Pollution Management Database; CSA Metals Abstracts/METADEX; CSA Technology Research Database; Chemical Abstracts; Current Contents/ Engineering, Computing, and Technology; Engineering Information Inc.; Engineering Index Monthly; Information Service in Mechanical Engineering (ISMEC); Materials Science Citation Index™; Nova Information Services Co.; Research Alert; Science Citation Index; SciSearch.

Numerical Heat Transfer, Part B: Fundamentals (Print ISSN: 1040-7790) is published in print bimonthly for a total of 6 print issues per year; *Numerical Heat Transfer, Part B: Fundamentals* is published online monthly for a total of 12 issues per year by Taylor & Francis Group, LLC, 325 Chestnut Street, Suite 800, Philadelphia, PA 19106. Periodicals postage paid (USPS permit number 004-509) at Philadelphia, PA and additional mailing offices.

US Postmaster: Please send address changes to *Numerical Heat Transfer, Part B: Fundamentals*, Taylor & Francis Group, LLC, 325 Chestnut Street, Suite 800, Philadelphia, PA 19106.

Annual Subscription, Volumes 51 and 52, 2007
Print ISSN: 1040-7790, Online ISSN: 1521-0626
Institutional subscribers: $2075 (US), £1258 (UK)
Personal subscribers: $833 (US), £504 (UK)
An institutional subscription to the print edition includes free access to the online edition for any number of concurrent users across a local area network.

Production and Advertising Office: 325 Chestnut Street, Suite 800, Philadelphia, PA 19106. Tel: 215-625-8900, Fax: 215-625-8563.
Production Editor: Rebecca Finkel

Subscription Offices
USA/North America: Taylor & Francis Group, LLC, 325 Chestnut Street, Suite 800, Philadelphia, PA 19106. Tel: 215-625-8900, Fax: 215-625-2940.
UK/Europe: Taylor & Francis Customer Service, Sheepen Place, Colchester, Essex Co3 3LP, UK. Tel: +44 (0) 20 7017 5544, Fax: +44 (0) 20 7017 5198.

SUBJECT INDEX TO VOLUME 51

13th International Heat Transfer Conference, 413

Adaptive FEM/BEM Coupling for Solving Global Heat Transfer in High-Temperature Furnaces, 25
Atomistic Green's Function Method: An Efficient Simulation Approach for Nanoscale Phonon Transport, The, 333

Calculations of Steady and Pulsating Impinging Jets—An Assessment of 13 Widely Used Turbulence Models, 565
Comments on the Paper Application of a Novel Moving-Grid Methodology to Model the Interaction of a Synthetic Jet with a Turbulent Boundary Layer, 487

Decoupled Reconstruction Method for Simultaneous Estimation of Temperatures and Radiative Properties in a One-Dimensional, Gray, Participating Medium, 275
Discrete Ordinates Radiation Element Method for Radiative Heat Transfer in Three-Dimensional Participating Media, 121
Dr. Suhas V. Patankar on His 65th Birthday, 411

Efficient and Robust Numerical Scheme for the SIMPLER Algorithm on Non-Orthogonal Curvilinear Coordinates: CLEARER, An, 433
Equal Fourth-Order-Accurate Temporal/Spatial Scheme for the Convection-Diffusion Equation, On An, 67
Estimation of Surface Conditions for Nonlinear Inverse Heat Conduction Problems Using the Hybrid Inverse Scheme, 159

General Dynamic Linear Tensor-Diffusivity Subgrid-Scale Heat Flux Model for Large-Eddy Simulation of Turbulent Thermal Flows, A, 205
Generalized Enthalpy-based Macro Model for Ternary Alloy Solidification Simulations, A, 293

hp-Adaptive Finite Element Simulations of Viscous Flow Including Convective Heat Transfer, 491
Hybrid Cartesian/Immersed-Boundary Finite-Element Method for Simulating Heat and Flow Patterns in a Two-Roll Mill, A, 251

Implicit Fixed-Grid Method for the Finite-Element Analysis of Heat Transfer Involving Phase Changes, An, 585
Improved Numerical Scheme for the SIMPLER Method on NonOrthogonal Curvilinear Coordinates: SIMPLERM, An, 43
Improvement of SIMPLER Algorithm for Incompressible Flow on Collocated Grid System, 463
Introduction to the Lattice Grid, An, 415

Modeling Transient Heat Transfer Using SPH and Implicit Time Integration, 1
Mushy Cell Tracking Method for Simulating Gallium Melting, On a, 351

Numerical Simulation of Subcooled Nucleate Boiling by Coupling Level-Set Method with Moving-Mesh Method, 535

Optimal Numerical Methods for Choosing an Optimal Regularization Parameter, 515

Particle Transport in Microchannels, 141

Performance Examination of Geometry-Independent Near-Wall Second-Moment Closures in Simple and Backstep Flows, 179

Performance of a Parallel Molecular Dynamics Program for Computation of Thermal Properties, 315

Second-Order Radiative Transfer Equation and Its Properties of Numerical Solution Using the Finite-Element Method, 391

Simple and Effective Method for Enhancing Iteration Convergence of Incompressible Fluid Flow and Heat Transfer Simulations: Lagrange Interpolation for Initial Field, A, 229

Solution of Radiative Heat Transfer in 2-D Geometries by a Modified Finite-Volume Method Based on a Cell Vertex Scheme Using Unstructured Triangular Meshes, 97

Solving the Temperature Distribution Field in Nonlinear Heat Conduction Problems Using the Hopfield Neural Network, 375
